September 6, 1996 AFCEIVEN

Dear EDS:

VCI O I 1996

Per-your PUBLIC NOTICE in the ROMULUS NEWS, dated 8-16-960 L am sending you a copy of my Water Well Permit, dated 8-7-96, a permit to install a well and pump.

With this Water Well Permit, (which is good for one year, with an extension, if necessary), I am RESERVING MY FUTURE RIGHT, AS THE OWNER OF MY PROPERTY, TO OBTAIN THE ADDITIONAL GROUND-WATER, LOCATED IN THE AQUIFER UNDER MY PROPERTY; IN ADDITION TO, THE CITY WATER SUPPLIED TO ME FROM THE CITH OF ROMULUS! I am within FOUR MILES of the Wahrman and Northline Rd. well. Since MY WELL HASN'T BEEN DRILLED YET, I have NO WELL LOG to send to you; but, I respectfully request that YOU SEND ME A COPY OF YOUR MONITORING WELL LOGS, from the monitoring wells which were installed recently, at both the Wahrman and Northline Rd. location, and the Inkster and Wick Rd. location, according to your 8-9-96 letter addressed to Dr. Bill Cooper, Denny Parshall, Dr. David Long, and Bill Rustem. This information WILL ASSIST ME WHEN I DRILL MY WELL, by telling me what I can likely expect, regarding the different formations, located at different depths; the GEOLOGY OF OUR PROPERTIES, YOURS AND MINE, presumably being similar! Please, send me this info, ASAP!

Sincerely,

Sandra Yerman

RE: EDS Responses to "Committee Review"

Gentlemen:

Please find enclosed EDS' responses to the questions raised by citizens at the May 15, 1996 public meeting which have been revised (in italics type) in accordance with your review along with EDS' responses to the committee's "Additional Comments".

In addition, please be advised that in early May, 1996, the state amended PA 451 to require that new commercial hazardous waste injection wells and existing injection wells that wish to be converted to commercial hazardous waste operation must first obtain a PA 451 Part III permit. Consequently, the MDEQ Geological Survey Division, which was about to begin processing the EDS #1-12 and 2-12 applications (copies of which were provided to you previously) under PA 315 (the "Mineral Well Act") requested that we revise the applications to delete any mention of "hazardous" waste because hazardous waste cannot now be disposed of in the new wells until a PA 451 Part III permit is obtained. Accordingly, EDS filed revised applications with the Geological Survey Division which deleted any mention of "hazardous" waste.

A second major revision in the applications was to change the projected volumes from 170 gpm for 30 years with a total of 2,680,560,000 gallons injected to 170 gpm for 20 years with a corresponding total of 1,787,040,000 gallons injected.

Copies of the revised applications are attached for your further review, if necessary, and copies have also been delivered to the Romulus public library to be maintained for public review.

Also enclosed are the logs from the monitoring wells installed recently at the facility which were the basis for the Hydrogeologic Study.

Should you have any additional questions or comments, please feel free to contact us at your earliest convenience.

Sincerely yours,

Douglas F. Wicklund

President
